### **NEW MC EXIT DEVICE PROVIDES SECURITY LOCKING SOLUTION FOR NEW GENERATION OF EXIT HARDWARE AND THERMALLY BROKEN MULTI-CHAMBERED DOORS**

Leading security solutions provider, Adams Rite, has launched its MC Exit Device, a new two-point exit device locking mechanism designed specifically to be used with the new generation of thermally broken multi-chambered doors.

The MC Exit Device is a concealed two point locking mechanism designed to be compatible with the new Adams Rite panic and emergency escape hardware including the new 900 Series Exit Bar. As well as providing a secure locking mechanism for this new generation of exit hardware and for the new generation of thermally broken commercial door systems, a version of the MC Exit Device has also been developed for the traditional shopfront door systems.

The two-point exit device meets the requirements of BS EN 1125 and 179. It features an automatic hold open mechanism to ensure the locking points remain withdrawn and do not impede the closing action of the door before automatically relocking when the door closes and the bolts are aligned with its strikes. A 17mm Euro profile cylinder override is a standard feature along with the flexible drive element allowing it to be used with the new exit hardware on a wide variety of door thicknesses. The security of the locking mechanism is also further enhanced with an automatic deadlocking facility.

The MC Exit Device comes in a 18mm wide case and is available at [www.adamsrite.co.uk](http://www.adamsrite.co.uk)

#### **About Adams Rite**

Adams Rite Europe Ltd is one of the UK's leading security solutions providers and a BS EN ISO 9001:2000 approved company. A wholly owned subsidiary of Adams Rite Manufacturing in the USA, and part of the ASSA ABLOY Group, the company is one of a network of outlets stretching across the globe. Their aim is to develop and introduce quality products for existing and new markets that are secure, reliable and innovative. Adams Rite were the originators of the swing bolt mechanism, developed to cope with locking narrow stile aluminium doors, which remains the preferred method of locking on the majority of commercial aluminium doors. Today, product sectors include main locking, door controls, exit hardware, access control-locking products, and continuous hinges. Safeguard Doors, a division of Adams Rite manufacture a range of specialised 'made to measure' timber composite security, bullet resistant and blast resistant doors.
